

Cylinder anti-roll unit

*for 4-litre and 6-litre steel cylinders
 as well as composite cylinders*

Why use cylinder anti-roll units?

When placing compressed-air cylinders on level surfaces, precautions need to be taken to prevent the cylinders from rolling away. Otherwise, they may fall to the ground, and the cylinder valves could get damaged. The MENZL CARU is the perfect choice when it comes to effectively addressing this serious safety hazard.

Why use the MENZL CARU?

Whether on tables, on trolleys, on shelves or in cupboards, the sturdy and stylish MENZL CARU keeps cylinders securely in place, effectively preventing them from rolling away. The anti-roll units, which can be used with 4-litre and 6-litre steel cylinders as well as composite cylinders, are available in different sizes ranging from 1 to 3 cylinders.
